
ABSTRACT OF THE DISCLOSURE

36
A child-resistant yet senior-friendly packaging for tablets, capsules or similar pharmaceutical products. The packaging is a blister pack (12) with at least one cup (22) that receives tablets (18) in an external package, arranged between a base part (14) and a cover part (16), and that is closed by a cover film (24) that can be pressed through. The cover film (24) of the blister pack (12) is directed towards the base part (14) and the base part (14) comprises an opening (38) through which the product can be withdrawn. The cup (22) of the blister pack (12) is displaceably guided in a slot (30) in the cover part (16) and can be brought in alignment with the opening (38) in the base part (14) so that the cover film (24) can be pressed through and the tablet (18) can be withdrawn. A tear tab (32) is detachably linked with the cover part (16) via a perforated line (36) and covers the slot (30) at least partially.
